

随机过程作业五参考答案

习题四 18, 21, 22, 27, 29

18、设 $\{N(t); t \geq 0\}$ 是强度为 $\lambda(t) = t$ 的非齐次泊松过程, 求:

(1) $P(N(2) = 3)$

(2) $P(N(1) = 2, N(2) = 4)$

(3) $P(N(1) = 2 | N(2) = 4)$

解:

$$N(t) - N(s) \sim \pi\left(\int_s^t \lambda(h) dh\right)$$

(1)

$$P(N(2) = 3) = \frac{2^3 e^{-2}}{3!} = \frac{4}{3} e^{-2}$$

(2)

$$P(N(1) = 2, N(2) = 4) = P(N(1) = 2) P(N(2) = 4 | N(1) = 2) = \frac{(1/2)^2 e^{-1/2}}{2!} \cdot \frac{(3/2)^2 e^{-3/2}}{2!} = \frac{9}{64} e^{-2}$$

(3)

$$P(N(1) = 2 | N(2) = 4) = \frac{P(N(1) = 2, N(2) = 4)}{P(N(2) = 4)} = \frac{27}{128}$$

21、设 $\{B(t); t \geq 0\}$ 是标准布朗运动, 求:

(1) $P\{B(3.6) \leq 1 | B(1.6) = 0.8, B(2.39) = -0.1\}$;

(2) $\text{Cov}(B(8) - B(4), B(6))$

(3) $D(2B(1) + B(2))$

解:

(1)

$$P\{B(3.6) \leq 1 | B(1.6) = 0.8, B(2.39) = -0.1\} = P\{B(3.6) - B(2.39) \leq 1.1\}$$

$$B(3.6) - B(2.39) \sim N(0, 1.21) \quad P\{B(3.6) - B(2.39) \leq 1.1\} = \Phi(1)$$

(2)

$$\text{Cov}(B(8) - B(4), B(6)) = \text{Cov}(B(8), B(6)) - \text{Cov}(B(4), B(6)) = \min\{8, 6\} - \min\{4, 6\} = 2$$

(3)

$$D(2B(1) + B(2)) = D(2B(1)) + D(B(2)) + 2\text{Cov}(2B(1), B(2)) = 4 + 2 + 2\min\{4, 2\} = 10$$

22、令 $X(t) = (t+1)B\left(\frac{1}{t+1}\right) - B(1)$, 证明 $\{X(t); t \geq 0\}$ 是标准布朗运动.

解:

$X(t)$ 是 $B\left(\frac{1}{t+1}\right)$ 与 $B(1)$ 的线性组合, 而标准布朗运动 $\{B(t)\}$ 是高斯过程, 故其任意有限维线性组合仍是联合正态的, 因此 $\{X(t)\}$ 是高斯过程.

均值:

$E[X(t)] = (t+1)E\left[B\left(\frac{1}{t+1}\right)\right] - E[B(1)] = 0 - 0 = 0$ 故为零均值高斯过程。

协方差函数:

$$\begin{aligned} \text{Cov}(X(s), X(t)) &= \text{Cov}\left((s+1)B\left(\frac{1}{s+1}\right) - B(1), (t+1)B\left(\frac{1}{t+1}\right) - B(1)\right) \\ &= (s+1)(t+1)\text{Cov}\left(B\left(\frac{1}{s+1}\right), B\left(\frac{1}{t+1}\right)\right) - (s+1)\text{Cov}\left(B\left(\frac{1}{s+1}\right), B(1)\right) - (t+1)\text{Cov}\left(B(1), B\left(\frac{1}{t+1}\right)\right) + \\ &\quad \text{Cov}(B(1), B(1)) \\ &= (s+1)(t+1)\min\left(\frac{1}{s+1}, \frac{1}{t+1}\right) - (s+1) \cdot \frac{1}{s+1} - (t+1) \cdot \frac{1}{t+1} + 1 \\ &= (s+1)(t+1)\min\left(\frac{1}{s+1}, \frac{1}{t+1}\right) - 1 = \min(s, t) \quad \text{因此 } \{X(t); t \geq 0\} \text{ 是标准布朗运动} \end{aligned}$$

27、设 $\{B(t); t \geq 0\}$ 是标准布朗运动, 计算:

- (1) $P\left(B\left(\frac{1}{10}\right) \geq 1.5 \mid B\left(\frac{1}{6}\right) = 2, B\left(\frac{1}{4}\right) = \frac{12}{5}\right)$;
 (2) 在 $B\left(\frac{1}{6}\right) = 2, B\left(\frac{1}{4}\right) = \frac{12}{5}$ 的条件下, 求 $B\left(\frac{1}{10}\right)$ 的条件分布;

解:

- (1)

$$P\left(B\left(\frac{1}{10}\right) \geq 1.5 \mid B\left(\frac{1}{6}\right) = 2, B\left(\frac{1}{4}\right) = \frac{12}{5}\right) = P\left(\tilde{B}(10) \geq 15 \mid \tilde{B}(6) = 12, \tilde{B}(4) = 8\right)$$

$$= P\left(\tilde{B}(10) - \tilde{B}(6) \geq 3\right) = 1 - \Phi(1.5)$$
- (2)

$$\tilde{B}(4) = \frac{48}{5}, \tilde{B}(6) = 12$$

$$\tilde{B}(10) = \tilde{B}(10) - \tilde{B}(6) + 12 \sim N(12, 4)$$

$$B\left(\frac{1}{10}\right) \sim \frac{1}{10}\tilde{B}(10) \sim N\left(\frac{6}{5}, \frac{1}{25}\right)$$

29、设 $\{B(t); t \geq 0\}$ 是标准布朗运动, 对任给的 $t > 0, x > 0$, 求:

- (1) $P(|B(t)| \leq x)$;
 (2) $P\left(\max_{0 \leq s \leq t} B(s) - B(t) \leq x\right)$

解:

- (1)

$$P(|B(t)| \leq x) = P(-x \leq B(t) \leq x) = 2\Phi\left(\frac{x}{\sqrt{t}}\right) - 1$$
- (2)

$$P\left(\max_{0 \leq s \leq t} B(s) - B(t) \leq x\right) = P\left(\max_{0 \leq s \leq t} (B(s) - B(t)) \leq x\right)$$

$$= P\left(\max_{0 \leq u \leq t} B(u) \leq x\right) = 1 - P\left(\max_{0 \leq u \leq t} B(u) \geq x\right)$$

$$= 1 - 2P(B(t) > x) = 1 - 2\left(1 - \Phi\left(\frac{x}{\sqrt{t}}\right)\right) = 2\Phi\left(\frac{x}{\sqrt{t}}\right) - 1$$
